

Alcohol and its Role in the Evolution of Human Society: RSC

Archaeologists and anthropologists (especially ethnologists) have for many years realised that mans ingestion of alcoholic beverages may well have played a significant part in his transition from hunter-gatherer to agriculturalist. This unique book provides a scientific text on the subject of ethanol that also aims to include material designed to show non-scientists what fermentation is all about. Conversely, scientists may well be surprised to find the extent to which ethanol has played a part in evolution and civilisation of our species.
