

The Big Thaw: Adventures in the Vanishing Arctic

Winner of the Canadian Science Writers Associations Science in Society Book Award Banff Mountain Book Award Finalist The City of Edmonton Book Prize Finalist Shortlisted for the Wilfred Eggleston Award for Non-Fiction Climate changes effects are reshaping the Arctic profoundly. Landscapes are being radically transformed, animal habitats are disappearing, and natural resources are being revealed to an energy-starved world. Veteran Arctic journalist Ed Struzik took eleven trips throughout the north to document this rapidly changing land, gaining unprecedented access to scientific expeditions, native communities and security and sovereignty experts. The product of those trips, *The Big Thaw* is the only book that looks at global warmings wide-ranging impact on the Arctic. Struzik goes into the field with the worlds leading polar bear scientist, skis on melting glaciers with glaciologists, travels the Northwest Passage on an aging icebreaker and stalks a carnivorous rogue walrus with an Inuit hunter. His journeys bring him up close to some of the worlds most unique animals, from the iconic polar bear to the mysterious narwhal. Struzik melds the vivid stories of his experiences with fascinating explorations of the Arctics past -- from the alligators and giant tortoises that inhabited the north 55 million years ago, to the 19th century explorers who died searching for the Open Polar Sea -- and its possible future as the center of international struggle, underground smuggling and ecological disaster.
